Questions

A hand-drawn window frame with a grid background. The window has a title bar with three icons: a minus sign, a square, and an 'X'. The text inside the window is centered. There are yellow decorative shapes on the left and right sides, and a blue squiggle at the bottom right.

# Introduction

The definition of **impact** they use at NLF is:  
Any effects arising from an intervention. This includes immediate short-term outcomes as well as broader and longer-term effects. These can be positive or negative, planned or unforeseen.

**Impact Practice:** the activities that an organisation does to focus on its impact. This can include planning desired impact, planning how to measure it, collecting information about it, making sense of that information, communicating it and learning from it.

# Jargon Buster

Inevitably, Impact Management Practice has gathered a lot of different jargon terms that it is helpful to understand

## Activity

A specific action or process undertaken over a specific period of time by an organisation to convert resources to products/services to achieve results

## Assumptions

A proposition that is taken for granted, as if it were true. For project management, assumptions are hypotheses about causal linkages or factors that could affect the progress or success of an intervention.

## Baseline

Information collected before or at the start of a project or program that provides a basis for planning and/or assessing subsequent progress and impact.

### **Beneficiary**

The individuals, groups, or organisations that benefit from an intervention, project, or program.

### **Data**

Information collected by a researcher. Data gathered during an evaluation are manipulated and analysed to yield findings that serve as the basis for conclusions and recommendations

### **Case Study**

Case Study: A systematic description and analysis of a single project, program, or activity.

### **Goal**

The higher-order objective to which a project, program, or policy is intended to contribute. .

### **Casuality**

The relationship between one event (the cause) and another event (the effect) which is the direct consequence (result) of the first.

### **Indicator**

Quantitative or qualitative variable that provides reliable means to measure a particular phenomenon or attribute.

### **Inputs**

Resources provided for programme implementation. Examples are money, staff, time, facilities, equipment, etc.

### **Objective**

A statement of the condition or state one expects to achieve.

### **Intervention**

An action or entity that is introduced into a system to achieve some result. In the programme evaluation context, an intervention refers to an activity, project or programme that is introduced or changed (amended, expanded, etc).

### **Outcome**

A results or effect that is caused by or attributable to the project, programme or policy. Outcome is often used to refer to more immediate and intended effects. Related terms: result, effect.

### **Measurement**

A procedure for assigning a number to an observed object or event

### **Outputs**

The products, goods, and services which result from an intervention.

# Logic Model V ToC

- Terms often used interchangeably
- Confusion by some funders and grantees about expectations
- Both can greatly improve programme design and evaluation (but in different ways)
- Logic Model – United Way format is most widespread
- Theory of change – less standardised, but has core components

## Logic Model

- 30 year history
- Clear identification of goals (outcomes)
- First widespread attempt to depict programme components so that activities matched outcomes

## Theory of Change

- Popularised in the 1990s to capture complex initiatives
- Outcome based
- Causal model
- Articulate underlying assumptions

# What's the difference?

Logic models usually start with a programme and illustrate its components. Theories of Change may start with a programme, but are best when starting with a goal, before deciding what programmatic approaches are needed.

## Logic Models

require identifying programme components, so you can see at a glance if outcomes are out of sync with inputs and activities, but they don't show why activities are expected to produce outcomes

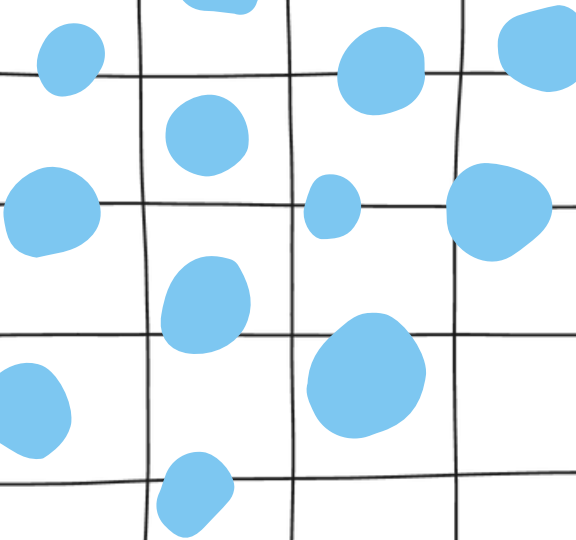

## Theory of Change

Theories of Change also require justifications at each step – you have to articulate the hypothesis about why something will cause something else (it's a causal model, remember!)

DIY Toolkit | Theory Of Change

Share

# THEORY OF CHANGE

# DIY

Watch on YouTube

The thumbnail features a red background with white text. At the top left is a red circle with 'DIY' in white. To its right is the text 'DIY Toolkit | Theory Of Change'. In the top right corner is a white arrow icon and the word 'Share'. The main title 'THEORY OF CHANGE' is in large, white, serif font. Below it, 'DIY' is in a large, white, outlined font. A red play button icon is centered over the 'DIY' text. At the bottom left, a dark grey bar contains the text 'Watch on' followed by the YouTube logo and the word 'YouTube'.

It's basically a visualisation of the day to day activities of an organisation and how they relate to their overall mission or long term goals in terms of outcomes for the areas they work in

## Theory of Change

# Green Fingers

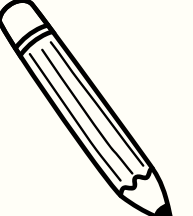

## Community Garden Project

Green fingers is an initial 12 month project whose aim is to give local people the opportunity to...

## Outcomes

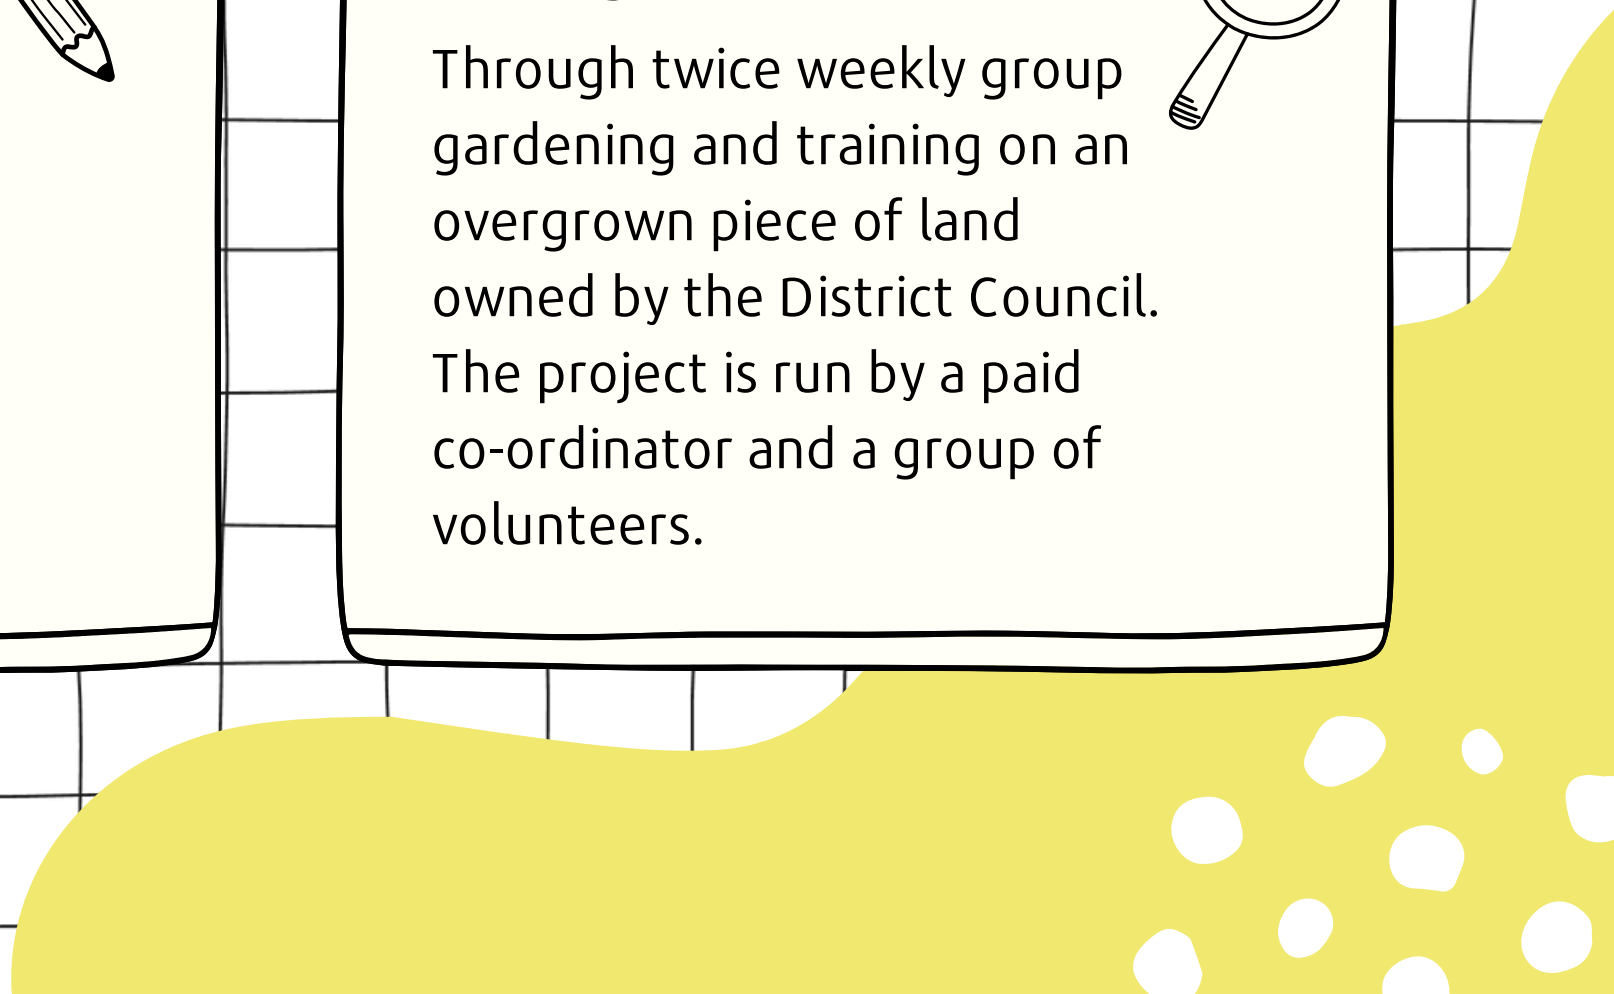

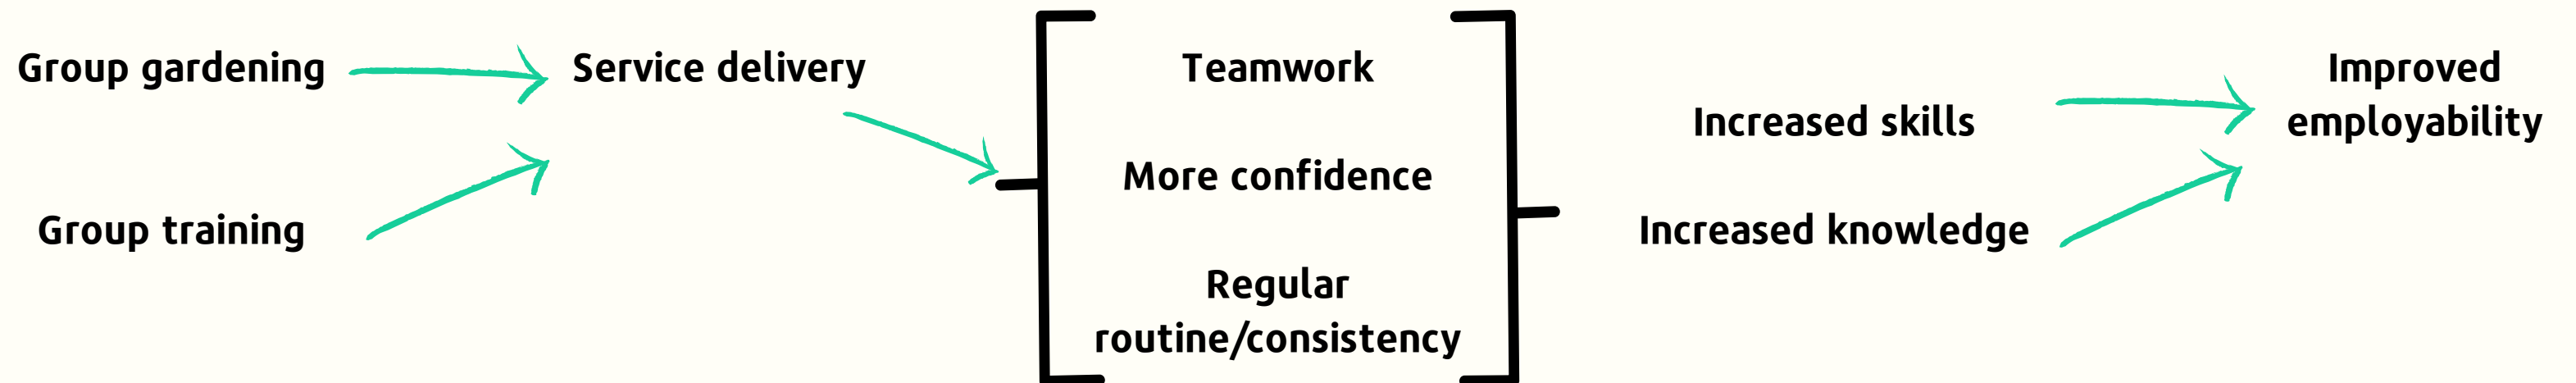

- Learn new skills
- Improve their health
- Improve their wellbeing

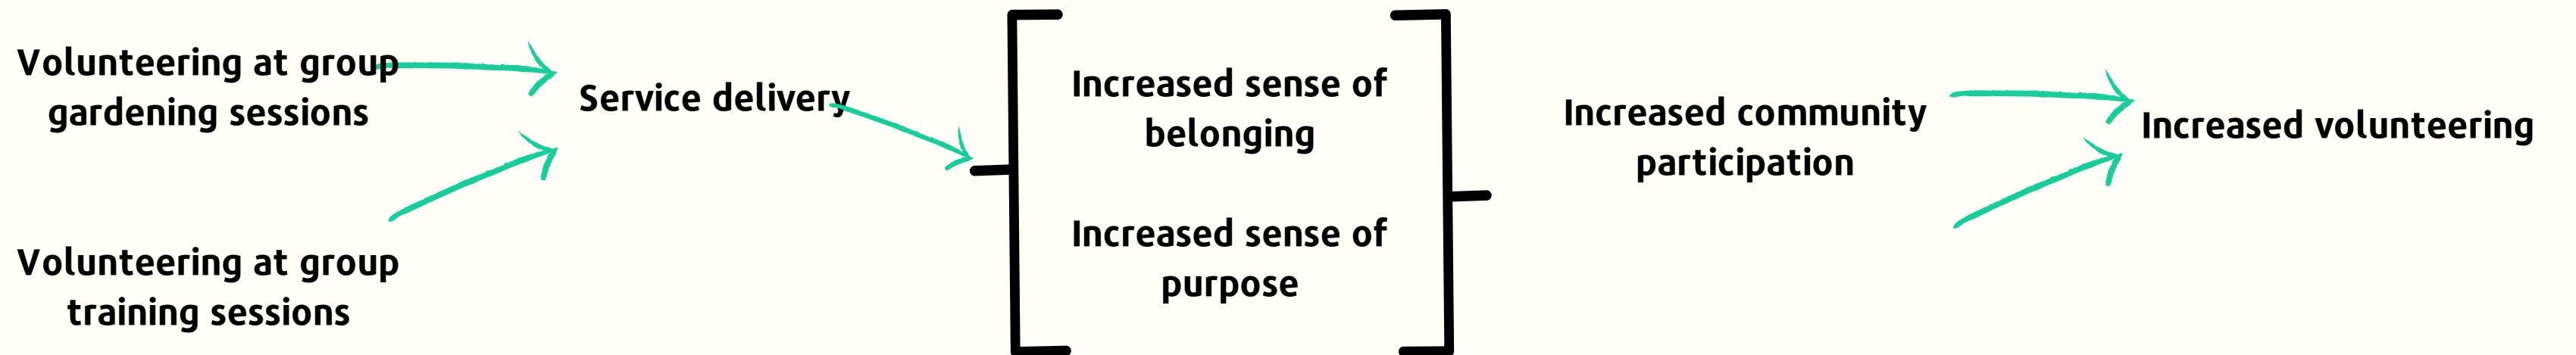

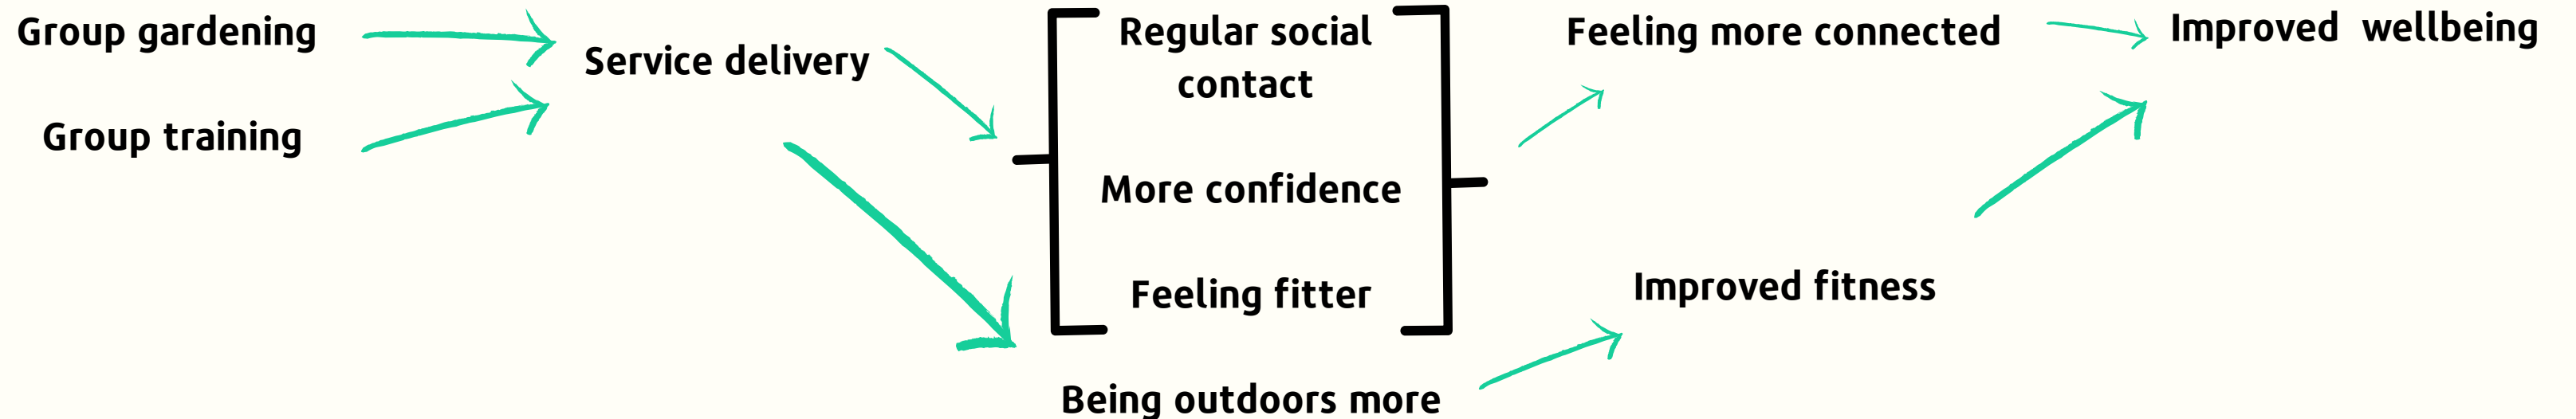

## Background

Through twice weekly group gardening and training on an overgrown piece of land owned by the District Council. The project is run by a paid co-ordinator and a group of volunteers.
